

Know-How®

Crescent's new Learning Management System (V1.0)

What is Know-How®?

Know-How® is an online solution developed to manage the administration, documentation, reporting and delivery of online e-learning courses efficiently.

Know-How® has been designed to help tackle the common challenges faced with rigid, uncompromising Learning Management Systems. The application provides an easy to use, configurable platform in which all e-learning courses, training records, and course certificates can be accessed.

Why should you choose Know-How®?

There are three core objectives of Know-How® (V1.0): to re-engage delegates with their e-learning, to reduce administrative time configuring LMSs, and to increase productivity with both delegates and administrators in mind.

Know-How® (V1.0) will allow you to:

- Access online training at any time, from anywhere
 - Low-bandwidth solution
 - Smartphone and tablet compatibility
 - Multi-language capability
- Host all SCORM-compliant online training material on one platform
- Issue in-app notifications and applications
- Create customised and scheduled reports

Supported Desktop Environments

| Server Application | |
|-----------------------|--|
| Operating Systems | Microsoft Server, Linux |
| Application Framework | PHP & Laravel Framework |
| Database | MySQL |
| Connection | Network connection to application webserver, min 100 Mbits/s QoS |
